

QSR Voice Channel PRD - Store Associate / Franchisee Inquiries

Scope discipline (READ FIRST): This voice channel handles ONE thing - live operational questions from a store associate or franchisee calling from the QSR pilot store while operating the restaurant. Four categories only:

1. **Order** - "Where is this order?", "Did we get this order?", "Driver is here, order isn't ready", "Order was cancelled, why?"
2. **Driver** - "Driver hasn't arrived", "Driver arrived early", "Driver left without the order", "Driver behavior issue"
3. **Complaints** - Customer complaint that reached the store; store associate wants to escalate or ask what to do
4. **Item** - "Menu item shows on Walmart.com but we don't carry it", "Item is out of stock", "Wrong item was ordered vs what we can make", "Item price mismatch"

Explicitly OUT of scope: Onboarding, Business Verification, payment-provider setup, Seller Center config, role management, e-signature, financial disputes, franchisee invitations, catalog authoring, driver payments. Those stay on the email channel per the QSR Email PRD.

Platform decision: This voice channel is built on the **Salesforce Native CCaaS solution**, not a third-party CCaaS layer. Components:

- **Service Cloud Voice** - inbound voice channel, IVR, call recording, real-time transcription. Amazon Connect telephony OEM'd inside Salesforce (or BYOT partner where required).
- **Omni-Channel Routing** - QSR skill / queue / presence / capacity management.
- **Service Cloud** - case management, KB, workflow, data.
- **Salesforce Service Console** - the agent workspace (unified pane for voice call, case, KB, and category-driven Lightning components).
- **Einstein for Service (optional)** - real-time transcription, next-best-action, case classification, post-call auto-summary.

Because voice, case, agent workspace, and data all live in the same platform, there is **no external CTI screen-pop and no third-party workspace** to integrate. Call and case are natively linked when a Service Cloud Voice call arrives.

Project details

Field	Value
Project Name	QSR Voice Channel - Store Associate / Franchisee Inquiries
Parent BRD/PRD	QSR BRD (Confluence pageId=3311498079) + QSR PRD v1.0 (April 2026)
Version	V0.3 - Draft (Sept 8, 2026) - platform on Salesforce Native CCaaS
Status	Draft - open for review
Date	September 2026
Requirements for which Product	Salesforce Service Cloud Voice, Salesforce Omni-Channel Routing, Salesforce Service Cloud (case), Salesforce Service Console (agent workspace), Einstein for Service (optional)
Program	Walmart.com QSR - Subway pilot (2 CT stores), scaling to Domino's, Taco Bell, Dunkin, McDonald's
Target Timeline	FY27 Q1-Q2

RASCI

Role	Owner(s)
Responsible	Product: Surojit Mukhopadhyay Engineering: Salesforce Voice / Service Cloud implementation teams
Approver	Business / Operations / Program: Troy Avidano, Jeff Stanley
Supporter	Tech Ops, Partner Services, LMD, Salesforce platform team, CES
Consultant	Legal, WFM, Compliance
Informed	Care Operations, Spark Driver Team, Subway Corporate

1. Introduction

Walmart's QSR program launches restaurant ordering (starting with Subway) with delivery via Spark drivers. Live restaurant operations create real-time questions that a store associate or franchisee cannot resolve through the Seller Center or asynchronous email:

- A Spark driver is standing at the counter and there's no ticket on the POS.
- The store never received a scheduled order and it's ten minutes past the promise time.
- A customer just called the store directly to complain about a missing item and the associate needs to know how to handle it.
- An item shows on Walmart.com but the store is out of it, and the associate wants to know how to signal that.

These are all **live, on-the-floor operational questions** that need a real-time voice channel. Voice support for QSR is **newly added scope** from the Sept 8, 2026 phone channel meeting, delivered on the Salesforce Native CCaaS stack (Service Cloud Voice + Omni-Channel Routing + Service Cloud + Service Console).

Caller persona: QSR store associate (Store Manager or Store Operator role in Seller Center) or franchisee (Franchisee Admin role) calling while at or on behalf of the restaurant.

2. Problem statement

There is no existing QSR voice channel. If a Subway associate today needs live help with an order failure, driver dispute, complaint, or item issue, there is no supported voice route to a QSR-trained agent. This creates:

- **Cost-of-driver-wait** penalties when driver-at-store / missing-order scenarios have no live resolution path.
- **Customer complaints escalating to social media** when the store cannot get real-time guidance on how to handle a complaint that reached them directly.
- **Item-availability mismatches** that persist because the store has no live channel to signal "we don't carry this."
- **Reason-code miscoding** when async email captures LMD650/651/652 dispositions hours after the fact instead of during the incident.

3. Four inquiry categories (what this voice channel handles)

ORDER

Order-related

- Order not received at store / not on POS (LMD652 candidate)
- Order shows on POS but details missing / wrong customer address / wrong item mapping
- Customer says they placed an order but store cannot find it
- Order was cancelled after prep started - who eats the cost?
- Order status checks (WISMO from store side - "is this order still coming?")
- POS sync appears delayed / batched (multiple orders arriving late)
- Order was auto-refunded but store has already prepared - what to do with food?

DRIVER

Driver-related

- Driver has not arrived and order is prepared / getting cold
- Driver arrived before order was ready (prep-time mismatch - LMD650 candidate)
- Driver arrived but store is not open (LMD651 candidate)
- Driver left without the order
- Driver behavior issue - rudeness, safety concern, uniform / bag concern
- Multiple drivers arrived for same order
- Driver requesting to un-batch - store cannot execute, needs Walmart to
- Bag sealing / food-safety issue at handoff

COMPLAINT

Complaints

- Customer called the store directly to complain (about food quality, missing item, cold food, wrong order)
- Customer showed up at the store in-person with a Walmart-QSR complaint
- Customer is threatening a bad review / social escalation
- Store received a complaint but does not know the order was placed via Walmart
- Refund / appeasement request from customer that store cannot process
- Complaint about the driver (delivery experience) that store received on customer's behalf
- Allergen / food-safety complaint (P0 - regulatory)

ITEM

Item-related

- Menu item shows on Walmart.com but store does not carry it (regional menu mismatch)
- Item is out of stock right now - how to signal to Walmart
- Item is listed at the wrong price
- Item was ordered with a modifier / customization the store cannot honor
- Item image / description on Walmart.com does not match what store makes
- Store wants to know when a new item / promo goes live
- Catalog visibility question - "why isn't our combo showing?"

4. Business requirements

#	Business requirement	Categories	Priority
1	Provide a QSR-dedicated voice channel on Salesforce Service Cloud Voice, reachable by store associates and franchisees	All 4	P0
2	Route calls via Salesforce Omni-Channel to a QSR-trained agent tier working in Salesforce Service Console	All 4	P0
3	Capture caller role (Franchisee Admin / Store Manager / Store Operator) and inquiry category (Order / Driver / Complaint / Item) up-front for agent context	All 4	P0
4	Enable live order-failure dispositioning with LMD reason codes (LMD650, LMD651, LMD652) captured on the call as Salesforce case fields	Order + Driver	P0
5	Enable live driver-issue triage (un-batch request, driver-behavior report, wait-SLA breach)	Driver	P0
6	Provide a complaint intake and handoff path for store-received complaints (with allergen / food-safety fast-track)	Complaint	P0
7	Provide an item-availability signalling path (out-of-stock, wrong item, price mismatch) that feeds catalog / adapter teams	Item	P1
8	Every voice interaction lands natively as a Salesforce case (Service Cloud Voice pins call to case automatically); cross-channel history visible in the same case timeline	All 4	P0
9	Comply with call-recording disclosure and Walmart standard recording / retention policy (native Service Cloud Voice recording + Shield event monitoring)	All 4	P0
10	Provide callback / voicemail fallback for peak / after-hours coverage (native Service Cloud Voice + Omni-Channel)	All 4	P1

5. Product requirements

#	Business req	Use case	Product requirement	Priority
1	QSR voice channel on SF Voice	Dedicated Service Cloud Voice number + IVR flow	Stand up a QSR toll-free number on Service Cloud Voice (Amazon Connect OEM or BYOT). Build the IVR flow using Service Cloud Voice Flows: greeting + role capture (Franchisee / Store Manager / Store Operator) + category capture (Order / Driver / Complaint / Item).	P0
2	Trained agent tier	QSR skill in Omni-Channel	Create a QSR skill in Salesforce Omni-Channel with skill-based routing rules. Assign trained QSR agents to the skill. Training covers order-flow (OMS -> Subway API -> POS), 3 LMD codes, driver / un-batch flow, complaint handling, item-availability signalling.	P0
3	Role + category context	Native call-to-case linkage	Role + category captured in the IVR are written directly onto the Salesforce Voice Call record and the linked Case. Service Console opens the case natively when the call is accepted - no external CTI needed. Category drives the visible sub-tab (Order / Driver / Complaint / Item).	P0
4	LMD reason codes	Post-call disposition on the Case	Mandatory case-close disposition field: LMD650 (Order Not Ready) / LMD651 (Store Closed) / LMD652 (Store Did Not Receive Order) + operational codes (Complaint / Item / Other). Case-close validation rule blocks save if disposition empty. Feeds LMD Dashboard (Power BI) via Salesforce report or data pipe.	P0
5	Live order-failure	Order Lookup Lightning Component	Custom Lightning component embedded in the Service Console: query OMS by order ID / customer name / FID + time-window. Displays POS-received status, Subway API adapter timestamp, driver-assigned status. Enables live LMD652 disposition.	P0

6	Live driver-issue	Driver Lightning Component	Custom Lightning component: current assigned driver, ETA, wait-time-so-far. One-click "Un-batch request" action calls the LMD un-batch API via Salesforce Flow or Apex. Warm-transfer path (Omni-Channel transfer) to Spark driver support queue.	P0
7	Complaint intake	Complaint intake Lightning form	Custom Lightning form: complaint type (food quality / missing item / cold food / wrong order / driver behavior / allergen), severity, customer contact if available, action taken. Auto-populates fields on the linked Case; sets Case.RecordType = Complaint.	P0
8	Item-availability signalling	Item Signal Lightning form	Custom Lightning form: item ID / name, issue (OOS / wrong-price / wrong-image / modifier-not-supported / not-carried-here), duration (right-now / today / ongoing). On save, creates a child Case routed via Omni-Channel or Salesforce Flow to Subway API adapter team + catalog team queue.	P1
9	Allergen / food-safety fast-track	P0 complaint path	Complaint form includes an Allergen / Food Safety checkbox. When ticked: Salesforce Flow fires a P0 alert to a designated on-call queue (Compliance + Partner Services) within 15 minutes; validation rule blocks case-close until Compliance user checks the acknowledgement field.	P0
10	Native case linkage	Voice Call -> Case pinning	Service Cloud Voice pins every call to a Case natively. On accept: Salesforce Flow queries existing open Cases by phone number / FID / active-order-ID; if found, links the Voice Call to the existing Case; if not, auto-creates a new Case tagged QSR-Voice + category and links the Voice Call.	P0
11	Cross-channel continuity	Prior-interaction history	Service Console displays the Case timeline for this Account / FID showing prior email cases + voice calls within the last 30 days, so the agent can pick up context without asking the caller to repeat.	P1
12	Auto-summary	Einstein Conversation Insights + Summary	Real-time voice transcription via Service Cloud Voice; post-call auto-summary via Einstein appended to Case.Description. Agent can edit before saving. Optional: Einstein auto-tags LMD code, complaint type, or item ID mentioned in the transcript.	P1
13	Callback fallback	Native Service Cloud Voice callback	Configure Service Cloud Voice / Omni-Channel callback: "Press 1 to hold your place in line and get a callback." Voicemail transcribed to Case with 4-hour callback SLA. Salesforce Flow enforces the SLA and creates follow-up tasks.	P1
14	Warm-transfer paths	Omni-Channel transfer actions	Configure Omni-Channel transfer actions with call context preserved: transfer to AJ Claessens (backend escalation), Spark driver support queue (driver behavior / batching), Compliance on-call queue (allergen / food safety).	P1
15	Recording + compliance	Native Service Cloud Voice recording	Standard call recording via Service Cloud Voice per Walmart policy, with disclosure in the IVR greeting. Retention configured per policy. Salesforce Shield event monitoring on Voice Call + Case objects for audit. No PCI expected (no payment data captured on this channel by design).	P0
16	Reporting	QSR voice metrics via Salesforce Reports + Tableau	Native Salesforce reports on Voice Call + Case: call volume by category, disposition-code volume, average AHT by category, LMD650/651/652 rate, complaint-severity mix, item-signal volume by store. Feeds LMD Dashboard (Power BI) via Salesforce data pipe or CRM Analytics / Tableau.	P1
17	Phone-number publishing	How stores find the number	Publish QSR voice number in: Seller Center welcome-kit for franchisees, store-employee-facing signage / job-aid, driver in-app deep-link for driver-transfer path, restaurant-side onboarding pack.	P1

6. Traceability matrix

All rows use Salesforce as the primary system (voice, case, workspace all native to the platform). Only the voice-supported operational use cases are listed here - onboarding / payments / access stay on the email portal per the QSR Email PRD.

#	Category	QSR voice use case	Primary system	Supporting system(s)	Ownership (Run)
1	ORDER	Order not received at store / not on POS	SF VOICE + CONSOLE + CASE	OMS, Subway API adapter	CES / CCA
2	ORDER	Order details missing / wrong on POS	SALESFORCE	OMS, Subway API adapter	CES / CCA
3	ORDER	Customer says they ordered but store cannot find it	SALESFORCE	OMS	CES / CCA
4	ORDER	Order auto-refund / cancellation reconciliation	SF (READ-ONLY LOOKUP)	Marketplace Payment Ops, OMS	Marketplace Payments
5	DRIVER	Driver not arrived / driver-wait past SLA	SALESFORCE	LMD, Spark driver systems	CES / LMD
6	DRIVER	Driver arrived before order ready (prep-time mismatch)	SALESFORCE	Subway API adapter, LMD	CES / LMD
7	DRIVER	Un-batch request from store	SALESFORCE	LMD un-batch API	LMD / CES
8	DRIVER	Driver behavior / safety report	Spark driver support	SF (OMNI-CHANNEL WARM TRANSFER + CASE)	Spark Driver Team
9	COMPLAINT	Customer complaint arriving via store	SALESFORCE	Customer Care	CES / Care Ops
10	COMPLAINT	Allergen / food-safety complaint (P0)	Compliance on-call	SF (P0 ALERT FLOW + CASE) , Partner Services	Compliance / Partner Services

11	COMPLAINT	Refund / appeasement request received at store	SALESFORCE	Customer Care	CES / Care Ops
12	ITEM	Item out of stock right now	SF (CHILD CASE TO ADAPTER / CATALOG QUEUE)	Subway API adapter, catalog team	Partner Services / Catalog
13	ITEM	Menu item mismatch (Walmart.com vs store)	SALESFORCE	Subway API adapter, catalog team	Partner Services / Catalog
14	ITEM	Item price / image / modifier issue	SALESFORCE	Subway API adapter, catalog team	Partner Services / Catalog
15	All	Callback / voicemail after-hours	SF (NATIVE SERVICE CLOUD VOICE CALLBACK)	Salesforce Flow for SLA	CES / Salesforce Voice team

7. In scope / Not in scope

In scope

- **Inbound voice** for store associates + franchisees (Store Manager, Store Operator, Franchisee Admin roles) via Salesforce Service Cloud Voice
- **Order** questions (missing, POS-sync, cancellation, reconciliation)
- **Driver** questions (no-show, early arrival, un-batch, behavior, safety)
- **Complaint** intake (customer complaints reaching the store; allergen / food-safety fast-track)
- **Item** signalling (OOS, wrong-price, wrong-image, mismatch, modifier issues)
- LMD650 / LMD651 / LMD652 live disposition captured as Case fields
- Native Service Cloud Voice callback / voicemail fallback
- Native Case linkage + Case timeline for cross-channel continuity
- Omni-Channel warm transfer to AJ Claessens / Spark driver support / Compliance

Not in scope (stays on email portal or excluded entirely)

- Onboarding (6-step Seller Center flow)
- Business Verification (EIN / documents / re-screening)
- Payment provider setup + payout / dispute handling
- Seller Center role management + configuration
- E-signature agreement flow
- Franchisee invitations (Phase 2 feature)
- Buyer / end-customer support for QSR items (routed to standard Walmart.com care)
- Spark driver self-service IVR (out of scope; drivers use in-app)
- Chat / chatbot for QSR (deferred)
- SMS / WhatsApp / social channels
- Outbound voice campaigns
- Third-party CCaaS / external CTI integration (this is Salesforce-native by decision)

8. UX (Service Cloud Voice + Service Console)

8.1 IVR flow (built as a Service Cloud Voice Flow)

1. **Greeting:** "Welcome to Walmart QSR support. This call may be recorded for quality."
2. **Role capture:** "Please say or press 1 for Franchisee, 2 for Store Manager, 3 for Store Operator."
3. **Category capture:** "Please say or press 1 for order, 2 for driver, 3 for complaint, 4 for item."
4. **Store lookup:** Prompt for FID (Franchise ID) or store phone number for pre-call context.
5. **Route via Salesforce Omni-Channel** to the QSR skill; role + category + FID written to the Voice Call record.
6. **Queue prompt:** "Estimated wait: X minutes. Press 1 to request a callback and keep your place in line." (Native Service Cloud Voice callback)
7. **After-hours branch:** If outside coverage window, offer voicemail (transcribed to Case) + callback within 4 hrs.

8.2 Service Console layout on call accept

Panel	Contents
Header strip (Case highlights panel)	• Caller role (Franchisee / Store Manager / Store Operator) • Category (Order / Driver / Complaint / Item) • FID / Store ID / Brand (Subway) • Linked Case ID + Case timeline (last 30 days)

Category-driven Lightning component	• Order category -> Order Lookup component (OMS query) • Driver category -> Driver component + Un-batch quick action • Complaint category -> Complaint intake form (+ Allergen flag) • Item category -> Item Signal form (creates child Case)
Omni-Channel widget / actions	• Warm-transfer -> AJ Claessens queue • Warm-transfer -> Spark driver support queue • Warm-transfer -> Compliance on-call queue • Case-close Disposition picklist (LMD650/651/652 + Complaint / Item / Other)

8.3 Post-call wrap-up

- Mandatory Case-close disposition (validation rule enforces)
- Einstein-generated call summary appended to Case.Description (agent edits before save)
- Follow-up email via Salesforce Email template if any promise made
- Compliance acknowledgement required on Case if Allergen / Food Safety flag set

9. Teams involved

Team	Points of contact	Voice-channel scope
Product	Surojit Mukhopadhyay	Voice PRD ownership; Service Console QSR workspace scope; category-driven Lightning component design
Business / Operations / Program	Troy Avidano, Jeff Stanley	Approvers; QSR program scope; commercial / staffing decisions; store-facing rollout
Salesforce Voice / Platform Eng	TBD (Salesforce implementation partner + Walmart Salesforce eng)	Service Cloud Voice setup (number + IVR Flow), Omni-Channel QSR skill config, Lightning component build, Einstein enablement
Engineering (OMS / adapter / integrations)	Michelle Fultz	OMS + Subway API adapter APIs exposed to Salesforce for Order Lookup / Item Signal components; LMD un-batch API integration
LMD / Driver Ops	Edwin Ortiz	Un-batch API triggered from Salesforce; driver-issue triage; Spark driver warm-transfer queue
Partner Services / Catalog	AJ Claessens	Warm-transfer queue for backend escalations (order pause, adapter fix, catalog signal)
Compliance / Legal	TBD	Allergen / food-safety on-call queue owner; recording-disclosure script; retention policy; Shield event-monitoring rules
WFM / CES	Brayden Wood, Melissa Elliott, Lilliana Cecena	QSR voice skill staffing forecast (via Omni-Channel presence data); agent training curriculum; disposition-code training
Care Operations	TBD	Customer complaint hand-back to standard care when appropriate

10. Key notes / gaps

- **Salesforce Voice licensing** - Service Cloud Voice + Omni-Channel + Einstein licences need to be procured / allocated for the QSR agent tier; unit cost + seat count is an open commercial question for Troy / Jeff.
- **Salesforce Voice number provisioning** - toll-free number lead time (Amazon Connect OEM vs BYOT partner). Impacts go-live schedule.
- **Volume is unknown** - QSR pilot is 2 CT stores; staffing forecast for 1,300 stores + multi-brand scale is a big open question for WFM.
- **Complaint handoff to customer care** - when a store-received complaint should route to Customer Care instead of being handled QSR-side needs a written policy.
- **Allergen / food-safety on-call queue** does not exist today; needs a designated Compliance queue in Salesforce with a Flow-driven 15-min SLA alert.
- **Item Signal form output** - which team owns action on OOS / mismatch signals (Partner Services vs catalog vs Subway adapter)? Needs a single triage owner and a Salesforce queue.
- **Spanish coverage** - many Subway store operators are bilingual; may need Spanish QSR agents in the Omni-Channel skill or overflow to Spanish general queue.
- **Cross-channel Case dedup** - the Flow that finds the existing open Case on call arrival needs a reliable match key (FID + phone + 30-day window is proposed but needs validation).
- **Coverage hours** - restaurant operating hours (5am-11pm) vs standard CES business hours vs 24/7 - needs a Business / Ops decision (Troy / Jeff).
- **Phone-number publishing** - which channels reach store associates vs franchisees vs drivers; needs a coordinated rollout plan.

11. Email PRD vs Voice PRD - side-by-side

Dimension	EMAIL portal	VOICE channel
Platform	Salesforce Service Cloud (case + email-to-case)	Salesforce Service Cloud Voice + Omni-Channel + Service Console (native CCaaS)
SLA	Async - BV 48hr; general 24hr	Real-time on the call; wrap SLA per category
Use-case fit	Onboarding, payments, access, config, general non-urgent	Live operational: order failure, driver issue, complaint intake, item signal
In scope	Franchisee onboarding + support portal (5 topic areas)	Store-associate + franchisee live inquiries (4 categories)
NOT in scope	Phone, chat, marketplace, buyer, driver	Onboarding, BV, payments, SC config, e-signature, driver self-serve, buyer, third-party CCaaS
Role identification	Portal login = role known	IVR Flow role-capture prompt, written onto Voice Call record
Category identification	Free-text intake or category dropdown on form	IVR Flow category-capture prompt (Order / Driver / Complaint / Item)
Reason codes	Selected on email form submission	Mandatory Case-close Disposition picklist (validation rule enforces)
Order-failure handling	Async response, up to 24-48hr	Live LMD disposition + un-batch trigger while caller waits
Complaint handling	Ticket queue with severity tag	Live Lightning intake form + Allergen fast-track Flow to Compliance queue
Item signalling	Not a primary email flow (customer-facing catalog is different path)	Live Item Signal form; creates child Case routed to adapter/catalog queue
Cross-channel continuity	Case created in Salesforce (own record)	Voice Call natively linked to existing Case via Flow; Case timeline shows email + voice history
Compliance	Written record	Service Cloud Voice recording + real-time transcription + Salesforce Shield event monitoring
Reporting	Salesforce reports + LMD Dashboard	Native Salesforce reports on Voice Call + Case objects; feeds LMD Dashboard via data pipe / CRM Analytics / Tableau
After-hours coverage	Async - inherent	Native Service Cloud Voice voicemail + 4hr callback SLA (Flow-enforced)

12. Open questions

#	Question	Owner	Status
1	QSR voice coverage hours - 24/7, business hours, or restaurant hours (5am-11pm CT)?	Business / Ops (Troy Avidano, Jeff Stanley)	Open
2	Voice-channel staffing forecast for pilot (2 CT stores) and Subway scale (1,300 stores)?	WFM / CES (Brayden Wood)	Open
3	Bilingual coverage - dedicated Spanish QSR agents in Omni-Channel skill or overflow to Spanish general queue?	WFM / CES	Open
4	Service Cloud Voice number provisioning - Amazon Connect OEM or BYOT partner? Lead time?	Salesforce Voice / Platform Eng + Product	Open
5	IVR Flow build + Omni-Channel QSR skill config - who owns implementation (Salesforce partner or Walmart platform team)?	Salesforce Voice / Platform Eng + Product	Open
6	Cross-channel Case dedup key - FID + phone + 30-day window sufficient for the Flow?	Salesforce eng + Product	Open
7	Allergen / food-safety on-call queue - who owns the Salesforce queue + Flow-enforced 15-min SLA?	Compliance / Legal + Partner Services	Open
8	Item Signal form output routing - single triage owner (PS vs catalog vs Subway adapter)?	Partner Services (AJ Claessens) + Catalog	Open
9	Complaint hand-back to Customer Care - when does a store-received complaint route out of QSR to standard care?	Care Ops + CES	Open
10	Publish phone number - Seller Center welcome kit, store signage, both, other?	Business / Ops (Troy, Jeff) + Partner Services	Open
11	Voice-channel go-live target - align with email or standalone Phase 1.5?	Product (Surojit) + Business / Ops (Troy, Jeff)	Open

12	Salesforce Voice + Omni-Channel + Einstein licensing / seat count for QSR pilot vs scale?	Business / Ops (Troy, Jeff) + Salesforce commercial	Open
----	---	---	------
